

IN THE SPECIFICATION:

Please amend the paragraph beginning at page 8, line 24 as shown below:

A first characteristic lies in that two-way valves, controlled by a control device 15, are disposed on the feeding side and the return side respectively, as an example of the intermittent means 100 as shown in FIG. 2.

Please amend the paragraph bridging pages 8 and 9 as shown below:

At the coating restart time, switching of a feeding side two-way valve 10 by control device 15 is carried out earlier than switching of a return side two-way valve 11 within a range not shorter than 5 msec and not longer than 500 msec. It is more desirable that the switching of the feeding side two-way valve 10 is carried out earlier than the switching of the return side two-way valve 10 within a range not shorter than 5 msec and not longer than 100 msec.
